

## THREE OPTIONS TO SUPPORT YOUR NEEDS.

**AERIAL APPLICATIONS**  
AIRCRAFT | UAS

**GROUND APPLICATIONS**  
TRUCKS | BACKPACKS | HANDHELD SPRAYERS

### DropVision® Basic

The basic version provides immediate data analysis of a droplet spectrum to ensure compliance with insecticide labels. This makes it an ideal tool for calibrating ground and aerial ULV spray equipment.

### DropVision® FL (Fluorescence)

The fluorescence system was created to consider the user who samples airborne droplets in geographic regions that have background particles that can be mistaken for insecticide droplets. Our proprietary software only recognizes droplets that contain a unique fluorescence tracer.

### DropVision® AG

This system utilizes cards vs. slides and is designed for the application of liquid products that produce larger droplets associated with mosquito larviciding treatments, aerial agriculture applications, controlling noxious weeds, and forestry pests. DropVision® AG is great for monitoring applications targeted towards cryptic larval habitats - often associated with invasive *Aedes* species.
