

Wireless Mobility

Better productivity and customer service are at your fingertips.

Mobile technology in your pharmacy can enhance your customers' experience and strengthen their connection to your pharmacy. QS/1 offers a range of integrated wireless products that help improve productivity and customer satisfaction for community HME, outpatient, and 340B pharmacies while meshing seamlessly with your pharmacy management system.

QS/1 DeliveryRx™ App

We offer several delivery options, including the free QS/1 DeliveryRx app for iPad®, iPad Air,™ and iPad mini®. With this app, you can download transactions, capture signatures, accept cash or checks at the point of delivery, and process deliveries for multiple stores on one device. Completed transactions are uploaded to your pharmacy management and POS systems using your Wi-Fi.

With QS/1 DeliveryRx, you can perform delivery transactions that do not require mobile credit-card processing by flagging a delivery as *Reconcile Before Delivery*, allowing you to use a credit card on file or an existing charge account for that patient. Once the completed delivery details are uploaded to your management systems, the transaction history is cleared from the mobile device.

eSigcap Mobile Signature Capture App

Fully integrated with QS/1's Pharmacy Management Systems, eSigcap can be used at your drive-thru, throughout your pharmacy, or even at point of delivery to wirelessly collect prescription signatures via Wi-Fi or cellular service. Your staff can pull up medications filled and waiting for a patient signature on their tablets, and then send signatures back to your QS/1 pharmacy system

for filing. This app, which does not require Point-of-Sale, enables you to capture signatures at the point of delivery or anywhere you have Wi-Fi or cellular service. eSigcap is ideal for collecting signatures for patient counseling, prescription pickup, and controlled substance logs. It requires a password-protected login, ensuring HIPAA compliance.

Remote Checkout® Mobile POS

QS/1's Remote Checkout gives you complete POS capabilities wirelessly – anywhere. It features a mobile tablet with a color touchscreen, barcode scanner, magstripe card reader, and a companion device to process EMV chip cards. For home delivery, you can collect signatures and swipe credit cards at your customer's door. In your pharmacy, use it at your drive-thru or as an extra register at peak times. And in hospital/outpatient pharmacies, Remote Checkout improves patient compliance and reduces readmissions by enabling you to deliver patients' medications to their rooms before they're discharged.

Remote Checkout allows you to take all forms of payment at the point of delivery using your Wi-Fi or cellular service, scan prescription labels, capture signatures and, using an available Bluetooth printer, print receipts instantly.
