

The Complete Solution For **MITOMYCIN BLADDER INSTILLATION**

EDGE Pharma offers compounded Mitomycin Bladder Instillation Syringes

Our standard dosage available is 40mg/40mL, and is dispensed in a prefilled unit-dose Luer Lock syringe.

This solution solves the USP 800 hazardous compounding challenge many hospitals and clinics now face when offering Mitomycin as a bladder instillation. Since the product comes ready-to-administer, you do not need to compound a hazardous drug in your facility.

EDGE specializes in offering hazardous compounding services for organizations, making the transition to USP 800 compliance easier.

Patent Pending

Mitomycin Bladder Instillation Syringes
