

**Priroda**

*twig the joy*

"Priroda" has been one of the largest producers of pet products in Ukraine for over 25 years. We produce goods for such pets as birds, rodents, dogs, cats and other ornamental animals.

In order to remain competitive on the market of products for pets, we constantly improve the quality of our products, watch for innovations and implement the latest technologies into the production of our products.

To improve the quality of animal feed, we use automatic grain purification and sorting lines, and modern ozonizers.

Intermediate packaging helps to protect feed from oxidation, fungi and insects.

For each species of birds and rodents we developed a special feed formulation that contains all necessary nutrients, microelements and vitamins. Some ingredients are introduced in the form of flakes and granules to boost the attractiveness and improve the taste of the feed.

In the production of grain delicacies, special attention is paid to the input control of raw materials.

To reduce the usage of excessive heat treatment and to prevent oxidation we use gentle product formation technology. It is important that grain sticks are firm enough. This dense texture allows birds to grind their beaks and rodents to use their teeth.

The packaging is designed to protect the feed from moisture and bacteria and to preserve the nutrients, microelements, fatty acids and antioxidants.

"Priroda" aims to create the best and most comfortable living conditions for pets based on their natural needs.

The wide range of our products includes:

- grain feeds and treats for rodents and birds
- cages
- toys and accessories
- hygienic litter
- shampoos, lotions
- clothing for dogs and cats
- beds and carrying bags
- veterinary medicine
- dog treats etc.

## Feed packaging technology in a modified atmosphere

«Priroda» in 2018 started to use the technology of packing feed mixtures for birds and rodents in a modified atmosphere

Modified atmosphere:

■ Harmless for pets

The modified atmosphere is composed of inert gases present in the air, but in special proportions.

■ Sustainably high quality of feed mixtures throughout storage period

The insect breeding stops. Nutrients are protected.

■ Proven European technology

This technology is actively used in Europe for food storage, including for pets.

### Quality

The «Priroda» production has been certified on the basis of the ISO 22000 standard by the TÜV Management Service GmbH.

■ Consistency of high quality products

Guaranteed quality control at all stages of production: acceptance of raw materials from suppliers, mixing of ingredients, and packaging.

■ Maximum nutrient maintenance

During production and packaging, the feed preserves all nutrients and vitamins needed for the health of ornamental birds and rodents.

■ Compliance with European standards

Compliance with international standards in the production of feed mixtures and treats.
