The Benefits of Omega-3 for dogs

Omega-3 is classified as an essential fatty acid (efa). Omega-3 fatty acids provide a source of energy for your dog. Omega 3 essential fatty acids are derived from either fish or plants. In the case of Omega 3 derived from fish oil you need to kill the fish and extract the oil from the flesh. The other source of Omega 3 is plant derived where it is extracted from chia seeds, canola seeds, olives, soybeans, flax seeds and other nut oils. Flavored Omega 3 Sprays for dry dog food are made from plant sourced Omega 3 oils. Flavored Omega 3 Sprays are non-fish kill, all vegan edible oils blended with natural flavorings from non-animal sources.

Omega-3 is a critical supplement that you should be adding to your dog's daily diet. A broad scope of scientific case studies have repeatedly demonstrated that omega-3 (efa's) produce measurable improvements in canine health. Omega-3's promote the development of the canine immune system, aid in the battle against inflammation and disease, improve the cognitive function of the brain and support a healthy heart.

Some of the many benefits of Omega 3 fatty acids for dogs are listed here:

- * Supporting the brain development of puppies |
- * Improving your canine companion's ability to fight cancer
- * Benefiting the immune system of dogs
- * Improving the skin and coat health of dogs
- * Helping dogs with arthritis by reducing inflammation
- * Boosting the heart and kidney health of canines
- * Helping dogs by reducing anxiety, depression and hyperactivity

Research has shown that omega-3 fatty acids can help to treat canine arthritis and chronic kidney disease.
