

## Why Choose TridentCare for On-site Vascular Access?

### Convenience

PICC service provided within 24 hours, most times within 4 hours. Our specialized Skilled Vascular RNs come to the patient, eliminating the need for hospital transport, potentially avoiding unnecessary expenses such as costly transportation and hospital fees.

### Improved Efficiencies

Immediate confirmation of proper PICC tip position at the bedside reduces time to infusion therapy and decreases clinician time spent on PICC tip repositioning. This technology will eliminate the need for the post insertion X-ray, thus reducing the facility's X-ray cost. The ability to provide on-site vascular access will reduce re-hospitalization.

### Increased Success

Our clinicians utilize EKG Tip location technology—the newest practice to expedite confirmation of tip placement—which maximizes success rates and positive experiences for our patients.

*(Per the 2016 Infusion Therapy Standards of Practice: [www.ins1.org](http://www.ins1.org))*

### Streamlined Processes

With just one quick call to our Vascular Access Service Direct Line, our team of specialists will schedule and process your order. When EKG-tip confirmation is not an option for a particular patient, X-ray confirmation is available. We can transmit digital images to a radiologist from the patient's location for immediate and accurate readings.

### Outstanding Safety Protocols

Our team uses Maximum Barrier Precautions and strictly adheres to all safety standards according to Infusion Nursing Society, Centers for Disease Control (CDC), and the Association for Vascular Access.
