Narrow Row Trailers

Designed for six foot rows

N101: 2-Bin Trailer

N102: 2-Bin Trailer with Slides

N103: 3-Bin Trailer with Slides

The right trailer for your needs

Our trailers come in two sizes (2-bin and 3-bin) and three varieties:

- Trailers without slides require a forklift to remove bins.
- Trailers with slides do not need a forklift, instead utilize your tractor's three-point hitch to remove bins.
- Tilt trailers include a release lever and slides to allow bin removal. (Tractor still required.)

N104: 2-Bin Tilt Trailer

The unique release of our N104 allows the trailer to tilt with a kick, so you can remove your bins easily with the aid of your tractor.

Release Lever

Conventional Row Trailers

Designed for eight foot rows

Bins fit snugly onto the trailer and can be removed by a forklift.

C101: 2-Bin Trailer without Slides

A rear locking retainer locks bins in, and folds down to allow for bin removal.

C102: 2-Bin Trailer with Slides

Built To Last

Western Square trailers are never out-sourced. Every piece is welded, powder coated and inspected in our facility in Stockton, CA. All labor is performed by expert craftsmen with years of experience.

There is no tougher finish to mild steel than our powder coating system. Our three stage phosphate washer prepares the steel for our electrostatic powder coating process. Finally, the coat is cured in our high temperature convection oven, sealing the finish to protect the steel from contamination and early rusting.

2-Ton Valley Bins

Built on Details

We are the only bin manufacturer to use powder coating. FDA approved food grade epoxy powder coating on the inside, and our standard baked enamel on the outside.*

The top rail is formed for rigidity and stability. The channel on the outside of the rail is blocked so the hooks won't catch.

Lifting Pin

Lifting and pivot pins are welded to triangular shaped plates for maximum strength.

D-Ring

Our D-ring end is ribbed, which distributes stress over the entire height of the bin, not just the D-ring itself.

*Bins also available in stainless steel
