

# Your bottle is your canvas.

## Set yourself apart.

Bottleprint just installed a high speed and very sustainable “label-less” and Zero Waste solution for your screen print needs! It’s a Kammann K15 automatic 4 color press, capable of printing up to 80 units per minute. That’s over 190,000 units during a 40-hour production week!

Ink to glass. Seamless. Beautiful.

### **What type of ink does your automatic press use?**

The press features a UV ink curing system, which generates less than 10% of the carbon footprint generated by ceramic curing methods. The UV inks exhibit more intense colors and can achieve much higher gloss and detail than ceramic inks and can more easily grab the attention of the ultra-premium consumer, in whichever category your product competes. These inks are also heavy metal free. Also, our process does not compromise the structural integrity of your containers. Ink-to-glass is not only beautiful, it can now be sustainable, as well.

### **How long Has Bottleprint been around?**

Bottleprint has printed millions of glass bottles since starting in Napa in 1992. Now located in Santa Rosa, our new location will enable us to take your project to the next level and gives us the space to store your bottles, should that need arise prior to bottling.

### **Why print on a bottle when we already have a label?**

Bottleprinting enables your brand to be distinctive and thus will add value to your brand. Due to its inherent ability to allow for greater design flexibility, an intense color hit and tactile feel to your bottles, Bottleprint will enable your brand to stand out in the increasingly crowded retail environment. Printing on bottles produces substantially less waste, plus, you'll have zero label application costs and slow downs during bottling.

### **I have an unusual shape bottle, can you handle it?**

Bottle printing overcomes labeling challenges like tapered or multi-shaped bottles. Also, unsightly wrinkles, bubbles and tears are eliminated.

### **It's cool, but is it affordable?**

Yes. Now with our much more efficient automatic press, our high volume pricing will reflect parity or a slight premium over pressure sensitive labels.

### **How do we get started?**

Contact us about your next project, whether it be printing your bottles or glassware and we'd be happy to supply you with a quote.
