

Avoid Water Restrictions and become a Zero Waste Water Winery

Using available technology, we can help make your winery water system reuse all winery water for irrigation, winery processes, sanitary applications and cooling water.

Following statements sound familiar?

"We have too much waste water"

A winery that wastes no water is not beyond the realm of possibility. With years of experience our team can work with your team to complete your waste water system needs.

"With all the rain I don't know where to put the water"

While ground water (or even rainwater) is brought into the winery, it is recycled as much as possible and ultimately leaves the water system as irrigation, evaporation or sanitary water. We have a solution!

WineSecrets will provide expert assistance and technology in improving your facility water system

Zero Liquid Waste Winery

Zero liquid waste is not impossible. With ever tightening effluent restrictions and an overall water shortage, a forward thinking winery will install such a system in the not too distant future. [Click here](#) to learn more.

Membrane Bioreactors

Offering ZeeWeed and ZeeBlok Membrane Bioreactor systems, our goal is to be your conduit to the technical expertise of SUEZ Water Technologies & Solutions for your winery wastewater efficiency and effectiveness. We translate their industrial systems into winery applications and assure proper installation, commissioning, and operability.
