

The Remote Farming Control Center For Data-Driven Growers

Leveraging actionable data to improve visibility and efficiencies across spraying, harvesting and all other field activities

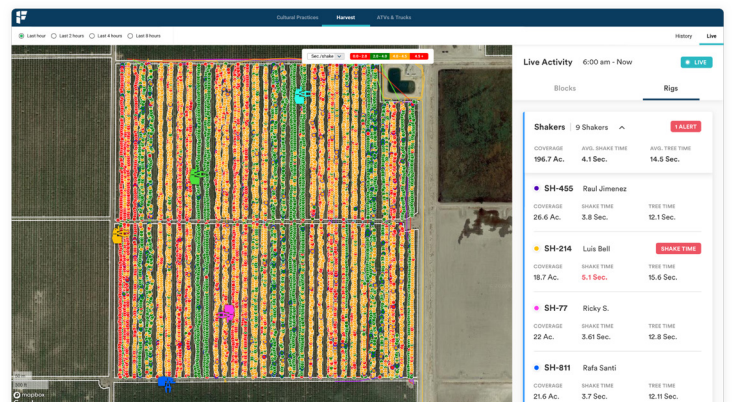

Create a Digitized, Connected Farming Operation

Using proprietary sensors and user-friendly web and mobile apps, Fieldin's platform seamlessly connects all machinery, implements and operators to help growers better manage and optimize field activities. Our Grower Support team customizes the platform to your unique operation, and our technicians handle all installations and repairs, so you can focus on what you do best – farming.

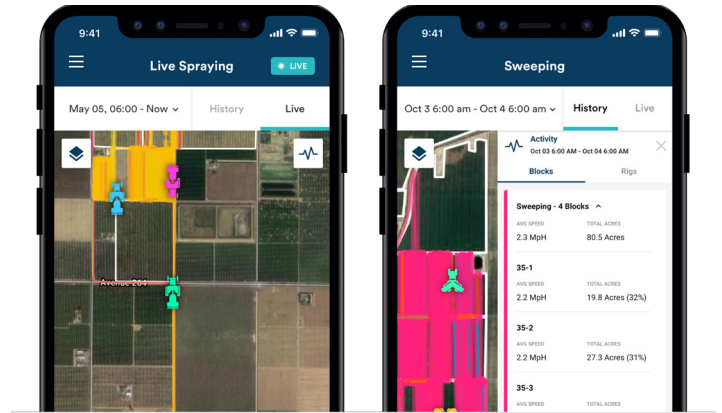

Manage Operations Remotely with a Customized Control Center

Fieldin's dashboards provide managers with remote visibility into field operations, improving operational efficiencies and agronomic issues across all locations. Our Control Center equips managers with real-time alerts to catch critical issues early on, along with regular reports to analyze and compare different machines, operators and patterns across multiple varieties or blocks.

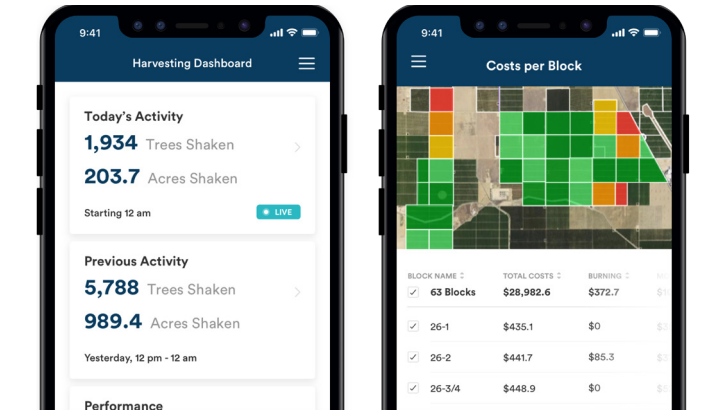

Optimize the Entire Growing Cycle, from Spraying to Harvest

Fieldin is the industry leader in providing actionable data and benchmarks for spraying, harvesting and other mechanized activities. This real-time data gives growers unrivalled insight into spray applications, ensuring every row is sprayed per the recommendation. It allows managers to monitor harvest activities, such as shake/drive times and trees covered per shift, as well as track ATVs and other equipment.

High-Level Overview and Customized Reports for Management

Fieldin provides daily, customized email reports of the previous day's shift, highlighting any issues or errors that occurred in the field (such as missed rows, double sprays or speed/timing issues). Along with promoting transparency and alignment throughout your organization, Fieldin's dynamic dashboards also help nurture a culture of open communication that improves decision-making and efficiencies in the field.
