

Mounting on inter-row tractors

# Single pre-pruners

# NAOTEC DL

The technological design of NAOTEC pre-pruners gives them perfect control of precision pre-pruning.

Speed and efficiency are inseparable criteria of this pre-pruner.

With a unique concept in the layout of its single and double discs, it absorbs quantities of vine shoots without jamming or catching of wires, the NAOTEC pre-pruner is the only plate pre-pruner able to remove tendrils of vegetation coiled around the wires.

Magnetic opening

Anti-catch lower bearings

Precision vertical cuts
