

Pumps and Mixing Technology for Wine Production

We have a long history of providing Moyno™ and Mono™ pumping equipment and Chemineer™ mixing technology to the wine industry.

Facilities face the daily challenge of moving high-quality fruit at maximum volume during harvest time. Our equipment's dependability and performance means you'll never have to worry about falling short of expectations.

Crush pad operations require robust equipment that can be integrated with other material handling and process systems in line with the overall site strategy. We have the expertise to make connectivity seamless.

Successful operations depend on the manufacturer, their distributors, and representatives have the knowledge and skills to support those who use and maintain the equipment on-site. This helps optimize your internal processes, eliminates waste, and protects your equipment investment. Our global presence means you always get the help and support you need to meet your operational goals.

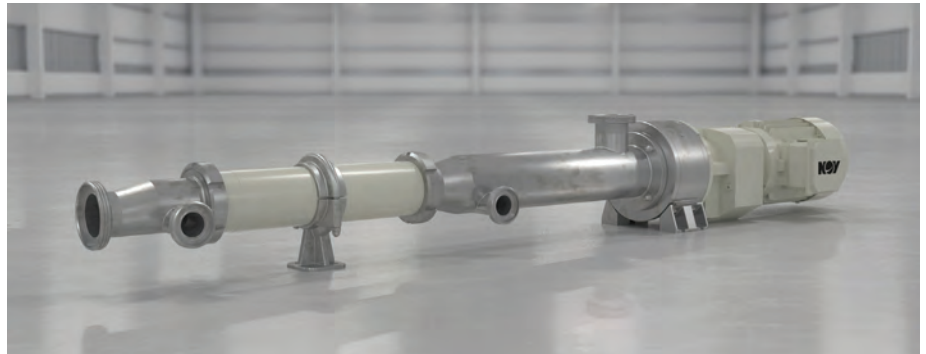

We know that to maximize your return on equipment investment you need products that last, are easy to maintain, and are of the highest quality. As the industry standard for over 50 years, our commitment to technical and service excellence makes us a resource that you can count on for your success time and time again.

Hygienic Pump

Gentle on grapes to ensure you have the highest quality product, our hygienic pump is suitable for applications up to 400 gpm.

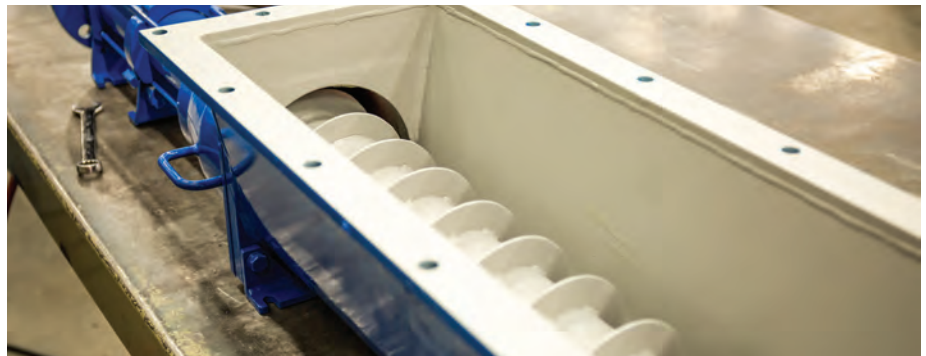

- Hygienic Pump

Open Throat Pumps

Our open throat pumps range from 14 to 100 tons per hour and are ready for you to implement, saving you time and capital costs.

- W Range Stainless Steel
- Sanitary 1000 Open Throat (shown)
- 2000 Series - Stainless Steel Open Throat

Mixing Technology

Our Chemineer agitators bring reliability and flexibility to your process.

- Model 20 HT/GT agitator (shown)
- Small mixers

Services and Aftermarket

We provide process expertise and innovative technology that enhance the efficiency and profitability of your business. Our deep knowledge of your processes ensures you have the latest technology for your application to get the job done right, with trusted products you can depend on – the first time, on time, every time.

From OEM to universal spare parts to on-site training, you can rely on us to provide quick and effective support throughout the entire life of your project.
