NEW IN SEASON 2018

New grafting table

The perfect complement to our grafting machines. The robust, galvanized metal table features many elaborate details:

- > For high grafted vines and long wood
- > Wagner's table prolongation facilitates the grabbing of the bases
- > Faster and more efficient working
- > A recess keeping away cutting remains from the working area
- > Eine Aussparung die die Schnittreste von Arbeitsbereich fernhält
- > Ready made bore holes for the assembly of the grafting machines

Benefit as one of the first from the technical features and contact us.

We develop and produce in-house.

Knowhow from a single source.

Your advantages

- > Woody plants up to 16mm thick
- > Clear and slim design
- > Adjustable knife guidance
- > Works with a two-step clock
- > Foot lever to trigger the cutting process

Workflow Automatic IV

- 1 Scion is laid down and cut by pedal (scion automatically will be held in position)
- 2 Then the base will be inserted, cut by second pedal board and connected with the scion. The grafting process is finished.

Versatile application possibilities

- > For vines and other softwoods like vines, walnuts, almond trees, nut trees of all kinds, ornamental shrub like hibiscus
- > Woody plants up to 16mm thick
- > Market launch in 2002
- > Saving 50% of the pedal movement
- > The average performance is about 30% higher than the „Automatic IV“

Workflow 1-SCHNITT-machine

- 1 Scion and base will be laid down centered on top of one another on two shelves
- 2 The foot lever only once completely passed through to the front and then again completely brought back. Finished
