

SCOTTCART AQUA WATER FILTRATION SYSTEM

INTRODUCTION

Gain control over your water quality with ScottCart AQUA – an easy to use, 3-step water filtration kit to bring your beverage production to the next level.

WATER FILTRATION CONSIDERATIONS

WATER FILTRATION CONSIDERATIONS

- Clean water directly impacts quality control.
- The water used to rinse and sanitize your final filters, bottling lines, and sensitive equipment must adhere to minimum quality parameters.
- City water supplies contain chlorine and other taint precursors.
- Water is the main ingredient in beer, mead, kombucha, spirits, hard seltzer...and much more!

CLARIFY, PURIFY, FINISH: THE WHOLE KIT & CABOODLE

- **Clarify:** Carbon step to remove toxins, heavy metals, taste, color and taint precursors, chlorine, fluoride, limescale and more.
- **Purify:** Polishes the water to a bright solid-free state, removing any visible suspended solids and significantly reducing the larger microorganism population present.
- **Finish:** Final polish to produce a microorganism-reduced, suspended solid-free finish.

SET IT & FORGET IT

Sign up for automated cartridge deliveries to your door every 3 months (our recommended frequency for cleaning housings and replacing filters) and save up to 10% on filter replacements.

This unique subscribe and save offer is only available to ScottCart AQUA customers!
