## **OUR COMMITMENT**

Winesecrets is "*The Professional's Choice For Advanced Winemaking Solutions!*" We strive to make winemaking more effective and efficient by offering power and capability to top wine producers through the newest global technologies and innovation. Winesecrets provides America's wine producers with separation technologies that improve efficiency, eco-performance and wine quality. We deliver technologies to North America's wine producers with unparalleled service, expertise and dedication, meeting the growing need for environmentally sustainable production methods, and solutions for some of the problems posed by the changing climate. We learned that the most formidable barrier to the adoption of environmentally friendly technologies is capital investment. We broke this barrier by mounting the equipment on trailers, and offering these technologies as a mobile service, greatly reducing the cost of use. Winesecrets' services allow wineries to bring a wider range of wines to market in less time than is possible with conventional methods of wine correction and finishing. Winesecrets offers a variety of wine filtration technologies. Winesecrets has helped winemakers in California, Oregon, Washington, Idaho, the B.C. Okanagan Valley, the Niagara region of Ontario, Texas and the Mid Atlantic region of the US.

## **OUR HISTORY**

Winesecrets was founded in 2003 to bring STARS, an environmentally friendly solution for tartaric stabilization to the California market. The company accepted a grant from the California Energy Commission to prove the viability of this exciting technology. In 2005, Winesecrets won the "Flex Your Power" Award in the Innovative Products and Services category. "Flex Your Power" is California's statewide energy efficiency marketing and outreach campaign and is a partnership of California's utilities, residents, businesses, institutions, government agencies and nonprofit organizations working to save energy.

In 2008, Winesecrets acquired the reverse osmosis-based technologies and alcohol-adjustment services of Sebastopol, California based Vinovation Inc. The acquisition allowed Winesecrets access to other filtration technologies including Brush-Fire Smoke and Brettanomyces Taint Removal using Reverse Osmosis. Through various partnerships, Winesecrets has since added a wide array of winemaking technology to its portfolio, including Ultrafiltration, perstractive alcohol adjustment and cross flow filtration.
