

 BlossomTM
sustainable closures

How does Greencap® works?

Greencap® is an innovative ROPP that allows safe separation of aluminum and glass after use.

Removability and TE functionality are guaranteed thanks to a special patented neck finish featuring three crossed threads; the closure breaks always the (thinner) bridges at the first opening. For the application of Greencap® a special rolling head with 6 threader rollers is needed.

BIO-COMPOSITE

We replace virgin plastic by recycled plastic.

➔ We replace 30% of recycled plastic by raw fibers. Agave for the Tequila, other fibers linked to the distilled product can be used.

➔ We replace 60% of recycled plastic by wood fibers derived from internal processing.

DESIGN TO REDUCE

the quantity of resources needed for a product to function properly

BIO-COMPOSITE

- Polymers from renewable sources:
 - Circular economy: ABS, PP
 - From non-petroleum products: 100% Biobased (sugar cane), lower carbon footprint.

- Compostable materials
 - Biobased PHB, lower carbon footprint.

DESIGN TO CHANGE
abandoning finite resources and
adopting recycled materials or materials
produced from renewable sources

DESIGN TO FADE
the waste by choosing biodegradable
polymers and by using few and easily
removable components

SOURCING

Ocean Plastic are intercepted and recycled around the world, from Alaska to Haiti to Southeast Asia, protecting sea life, reducing pollution and minimizing reliance on virgin plastic. Plastic collected can be fishing nets, plastic bottles, or plastic containers.

THE MATERIALS – Ocean Plastic Polypropylene

“Polypropylene is an opaque and waxy material often found in bottle caps. Fishing nets and gear are also frequently made from PP. Recycling nets supports efforts to reduce the notorious entangling “ghost nets” from floating in the ocean.”

DESIGN TO REVIVE
through recovering and recycling
materials and closures

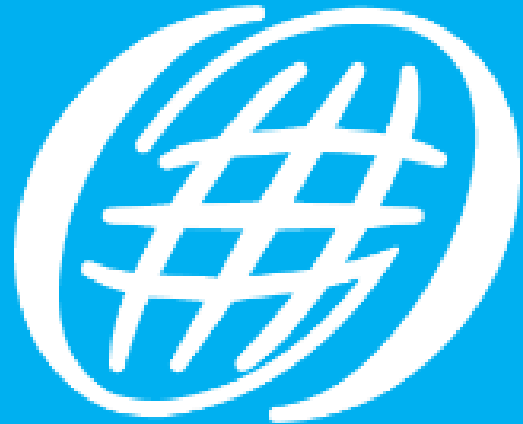

Guala Closures is producing closures using Recycled Plastic collected from the Ocean all around the world by Oceanworks.

Guala Closures has an exclusivity for the closures market with Oceanworks.

Our partnership with Oceanworks, give you the possibility to use their logo on your closure & labels to educate your consumers and enhance why you are using recycled plastic from the ocean for your closures.
