

# INTRODUCING THE ULTIMATE SAFEGUARD

## A PROVEN SOLUTION WHEN THE UNTHINKABLE OCCURS

For businesses in earthquake-prone areas, the risk to infrastructure and people is constant. But what is often not considered is the risk earthquakes pose to product and therefore profit. Until now, tank design the world over has been based on design codes developed to protect only people. ONGUARD reverses this approach.

Developed in New Zealand by structural engineers with first-hand experience of the destructive power of earthquakes, ONGUARD'S patented system dissipates seismic energy in a controlled manner, keeping liquid storage tanks and their contents protected.

Our system is focused primarily on preventing earthquake damage and loss, knowing that in doing so people are inherently safer as well. The result is an innovative, monitored system that guards against seismic activity, can be quickly and cheaply reset after an event, and minimizes the potential for negative impact to lives, livelihoods and the environment.

# ONGUARD DELIVERS UNPARALLELED EARTHQUAKE RISK MITIGATION

## OUR PRODUCTS

The key elements of the ONGUARD system are the patented energy-dissipating seismic anchors. These are manufactured in New Zealand to exacting standards and using a range of materials, each specifically selected and certified for its performance and durability. This hardware is provided as part of the ONGUARD system and is packaged and shipped to you, the contractor, tank supplier or installer.

Detailed drawings, methodologies and specifications are provided to assist with installation and set our standards for quality. The product is designed to cause little impact to your operation or tank aesthetic.

Installation of ONGUARD anchors is considered to be simpler and cheaper than most traditional systems and needs no specialist training. However ONGUARD representatives or partners are always on hand to provide technical advice before, during and after installation. Or, if you prefer, we are happy to appoint one of our preferred installers on your behalf and provide a turn-key service.
