LABELING
& CODING

Accuracy, speed, and efficiency: dedicated manufacturer of high quality labeling equipment for packaging and promotional needs. ID Technology provides a full range of labeling solutions from simple semi-automatic label applicators to high-speed label printer applicators. All solutions are engineered for both ease of use and reliability.

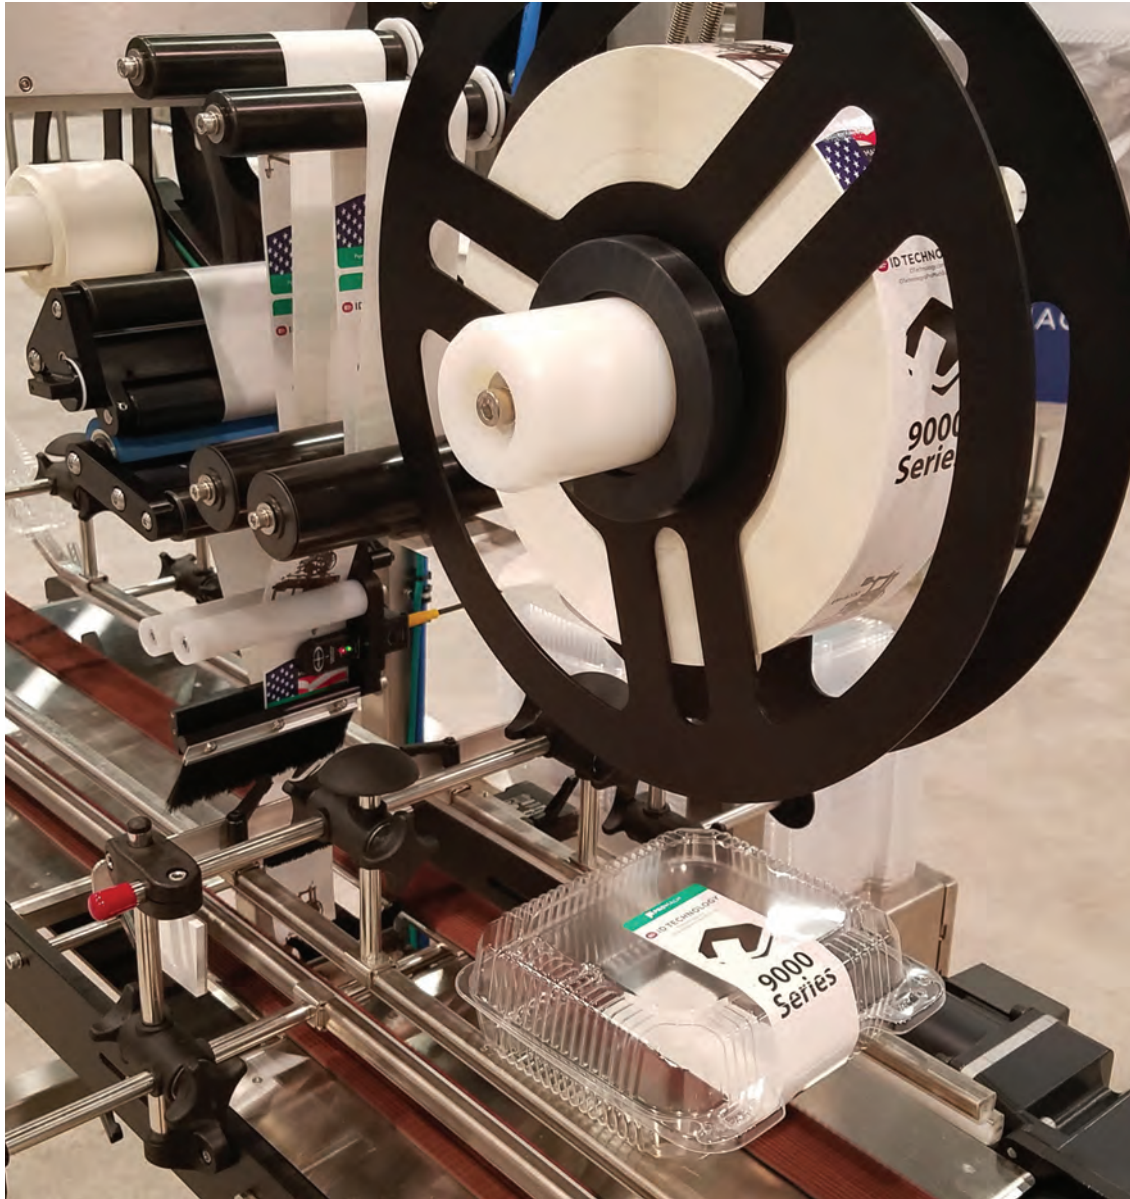

Regional label converting facilities across the United States and Canada offer fast, responsive service and support to ensure customers always operate at peak efficiency. ID Technology also offer state of the art coding and marking systems.

EPI 9210 Top & Bottom

USER-FRIENDLY INTERFACES AND SIMPLISTIC DESIGN

The 9000 Series is a range of simple, well engineered labeling systems designed to handle many of the most common labeling applications. Built in the USA, the 9000 Series labelers are competitively priced and simple to use and maintain.

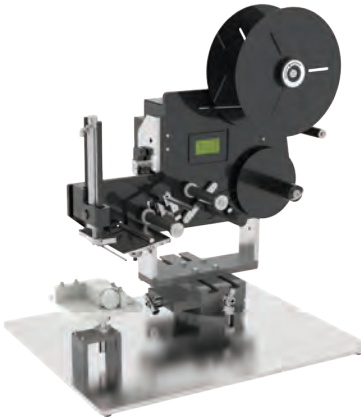

EPI 9220 applying a C-Wrap label to a clamshell container

LSI 9110 Semi-Automatic Wrap

LSI 9110 is a semi-automatic labeling system designed for labeling round containers.

Variable information can be printed on the labels using either a TTO thermal printer or a laser coder.

LSI 9120 Semi-Automatic Tamp

LSI 9120 is designed to label non-round products. It uses a tamp applicator to accurately apply the label to the product.

Variable information can be printed on the labels using either a TTO thermal printer or a laser coder.

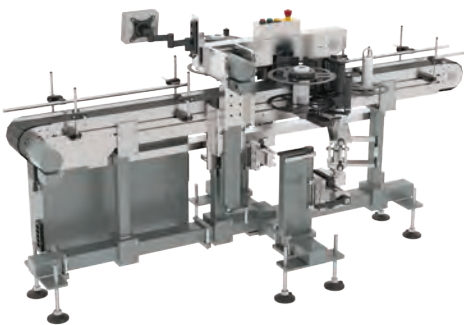

LSI 9130 with Wrap Station

LSI 9130 is designed to label round containers at speeds of up to 60 products per minute. Equipped with our latest M-Series labeling head, the 9130 offers simplicity and performance at a sensible cost.

LSI 9140 with 3-Point Wrap Station

LSI 9140 uses a three point wrap station that allows it to label products that are unstable, need extreme wrap accuracy or need the label to be applied in registration with a handle or mark.

LSI 9150 Front & Back

LSI 9150 is equipped with two M-Series labeling heads and applies labels accurately to both front and back of non-round products. This labeler can label a range of container shapes and can be fitted with a TTO printer or iCON laser coder to add variable data to the labels.

EPI 9210 Top & Bottom

EPI 9210 is a simple to use and highly reliable labeling system designed to apply a label to the top and/or bottom of a wide range of package types, such as boxes, clamshells, tubs and trays.

The EPI 9210 uses the well proven M-Series labeling head and is built using non-corrosive materials, making it ideal for use in meat/poultry and other food companies. A TTO or laser coder can be added to print variable information to the label.

EPI 9220 C-Wrap

EPI 9220 is our labeling system for applying a C-Wrap label to clamshells and other packages. The label is wrapped around the top, front and bottom of the package.

The EPI 9220 consists of a split conveyor housed in a sturdy frame, with dual label wipe mechanism and the M-Series labeling head. A TTO or laser coder can be added to print variable information to the label.

EPI 9230 Multi-Panel

Also available - the EPI Model 9230, which has the ability to apply top and/or bottom labels and C-Wrap labels for customers who need to be able to run both labeling types.

Solutions For All Label Requirements

ID TECHNOLOGY: A LEADER IN THE INDUSTRY

No product identification and tracking solutions company would be complete without label converting capability. With multiple facilities across the United States and Canada, ID Technology shows why they are a leader in the industry. From simple to complex, low to high volumes, and standard to custom label shapes, they can handle virtually any converting requirement you have.

ID Technology also offers both flexographic and digital full color labels on a wide variety of label materials. Flexographic printing is perfect for high volume runs, while digital provides quick turnaround on short run labels.

From simple to complex, low to high volumes, and standard to custom label shapes, ID Technology can handle virtually any converting requirement you have.

Custom Front & Back Labeling System

CUSTOM SYSTEMS

In addition to standard equipment, ID Technology can design and build custom turnkey labeling systems to suit your needs.

Contact ID Technology's sales staff with your toughest labeling challenges, they have the experience to solve your labeling problems.

ID Technology Has More to Offer in The Labeling Industry

ROTARY: PRESSURE SENSITIVE LABELERS

Modular Plus Series

Modular Plus Series

The Modular Plus Series of Rotary Labeling Systems is designed to be versatile, simple to set up and use, while producing excellent labeling performance.

The three machines in the line are selected to handle a wide range of labeling jobs and combines engineering excellence with the nationwide sales and support of ID Technology.

- Modular Plus 540-6T-SM
- Modular Plus 540-9T-SM
- Modular Plus 770-10-SM

As the leading single-source supplier for high-quality labeling, coding, and marking systems, ID Technology designs, manufactures, and integrates custom identification systems with fast, responsive service and support to ensure packaging lines always operate at peak efficiency. With labeling systems for applications in primary, secondary, and tertiary packaging, our solutions can provide accurate labeling and coding on virtually every substrate in every market.
